

Reviewer #1:

**Scientific Quality:** Grade C (Good)

**Language Quality:** Grade B (Minor language polishing)

**Conclusion:** Minor revision

**Specific Comments to Authors:**

Because of the immune system's disordered response and other compromised processes, the liver may be experiencing liver cell damage, ischemia-liver dysfunction, and drug-induced liver injury, which can end in multisystem organ failure. Patients with liver cirrhosis or those who have impaired immune systems may be more likely than other groups to experience worse results from the SARS-CoV-2 infection. This article reviews the possible problems, causes and solutions.

**Response:** The manuscript has been extensively revised.
