Re: **Electrical neuromodulation therapy for inflammatory bowel disease**

Dear Madam,  
Attached, please find the extensively revised and abbreviated version of the previous Manuscript. We hope that your readers will benefit from it. We like to take this opportunity to thank the reviewers and the editorial staff for their time and patience. Please feel free to let us know with any questions.

Regards

Salim Surani, MD

#### Reviewers Comments

Electrical Neuromodulation is the use of electric stimulation of nerves or brain regions as a therapeutic technique. The article lacks logic

Response: We appreciate the reviewers' comments. The manuscript has been extensively revised and underwent language polishing

#### Reviewers Comments

This is a very competent and thorough review on an emerging topic on IBD. Nevertheless, I have two major problems, which make this review not apt for publication: 1. It requires major language revision, it does not use language very well, starting on the abstract forward. 2. It is very long, it requires major summarizing - as it stands, it is not a minireview. I would suggest the authors to send the manuscript to a copy-editing service and to summarize around 20-30% of the total manuscript and submit it again.

Response: We appreciate the reviewer candid comment. We agree with the reviewer's point of view and have shortened and modified the manuscript. We also had the manuscript pre-read by English Major candidate from the IV League University
