

June 30, 2014

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 11041-edited).

**Title:** Postoperative reactive lymphadenitis: a potential cause of false-positive FDG PET/CT

**Author:** Yiyao Liu

**Name of Journal:** World Journal of Radiology

**ESPS Manuscript No:** 11041-edited

Revision has been improved according to the suggestions of reviewers:

- (1) A phrase "but has not been previously discussed" was deleted from the Abstract and Core tip.
- (2) The term "PET/CT" is used in the manuscript. Sorry for inconsistent uses of "PET/CT" and "PET-CT" in the original submission.
- (3) Toxoplasmosis and HIV were added as the causes of inflammatory lymphadenitis on FDG PET/CT in the Discussion.
- (4) Two references were added accordingly.
- (5) A statement was added in the Discussion: SUV cannot reliably discriminate between inflammation/infection and tumor.

All references had been checked and corrected.

All changes are highlighted.

Thank you again for publishing my manuscript in World Journal of Radiology.

Sincerely yours,

Yiyao Liu, MD, PhD
