

## **26951-Answering reviewers**

We thank the referees for the valuable comments and observations, which gave us the opportunity to better present our “field of vision”.

We describe below how the comments of the referees have been addressed in the revised version of the paper and we highlighted the text in green where you can find our revisions.

We tried to add something about current treatment sequences of CRPC (Rev. 02894946), and we wrote additional phrases (with new references) to support our model presented in the paper in order to give more data evidence (Rev. 02840817). We concluded with a perspective of Ra-223 treatment (Rev. 00504183)

Finally, we revised the language of our manuscript by a native speaker of English: all the corrections (grammar and syntax) are highlighted in yellow in the revised text.

In addition we changed the order of second, third and fourth authors.
