

## Format for ANSWERING REVIEWERS

May 19, 2013

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 3359-REVIEW.doc).

**Title: High density lipoprotein and cardiovascular diseases**

**Author: Filippatos TD, Elisaf MS**

**Name of Journal:** *World Journal of Cardiology*

**ESPS Manuscript NO:** 3359

The manuscript has been improved according to the suggestions of reviewers (ALL changes are highlighted with yellow color in the manuscript):

### **Editor comments**

1. Comment WL1: A short running title of less than 6 words should be provided.

**We now provide a short running title (page 1).**

2. Comment WL2: please add postcode.

**We added the postcode (page 1).**

3. Comment WL3: please give address in detail

**We now give the address in detail (page 1).**

4. Comment WL4: Telephone and fax should consist of +, country number, district number and telephone or fax number.

**We now give telephone and fax numbers in the appropriate format (page 1).**

5. Comment WL5: Please write a summary of less than 100 words to outline the most innovative and important arguments and core contents in your paper to attract readers.

**We added a summary of less than 100 words that outlines the most important contents in our paper.**

6. Comment WL6: Please add a title for your text.

**We added a title for our text.**

7. Comment WL7: The Authors should put the number of the references in Arabic numerals according to the citation order in the text. Put reference numbers in square brackets in superscript at the end of citation content or after the cited author's name.

**The references are now formatted appropriately.**

**We also added some comments regarding the results of HPS2-THRIVE trial which were recently announced (page 2 of the text) and we deleted the corresponding information from the end of our manuscript (page 3 of the text).**

### **Reviewer 1 comments**

Drs. Filippatos and Elisaf did a good review of current literature with respect to the role of HDL and LDL on cardiovascular disease and their comment on the recently published paper by Voight *et al.* Plasma HDL cholesterol and risk of myocardial infarction: a mendelian randomisation study in Lancet (2012) is valuable and should be published in World Journal of cardiology.

I have no comments on the manuscript. It is well written and investigated.

**We thank the reviewer for his kind comments.**

**Reviewer 2 comments**

The topic is of interest for WJC readers. Based on data by the recent article of Voight et al, the present comment reports innovative and interesting point of view, with appropriate discussion of available evidence. For these reasons it is worth for publishing.

**We thank the reviewer for his kind comments.**

**Reviewer 3 comments**

The authors provide a rather interesting commentary to the paper pf Voight et al. It would be for the benefits of the readers, if the authors could include section Conclusion, and state major points of the relationship between HDL-C and CVD risk.

**We added a conclusion in the end of our manuscript showing the main facts analyzed in the text. Furthermore, according to the editor's comments we added a core tip section presenting the most important contents in our paper.**

Thank you again for publishing our manuscript in the *World Journal of Cardiology*.

Sincerely yours,

A handwritten signature in blue ink, appearing to read 'M. Elisaf', is written over a long, thin horizontal line that spans most of the width of the page.
