

March 14, 2016

Dear Editor,

My colleagues and I thank you and the reviewers for your interest in our article and favorable comments on our current manuscript. Therefore, I am respectfully submitting our revised manuscript, entitled “Successful Extracorporeal life support in sudden cardiac arrest due to coronary anomaly.”

As you kindly provided us with the chance to revise our manuscript, we have carefully reviewed the insightful comments from you and the reviewers and corrected the manuscript according to these suggestions. We hope that we have answered the reviewers' questions adequately. We underlined these changes in the manuscript. We hope that you and the reviewers find our manuscript satisfactorily revised and worth publishing in World Journal of Cardiology.

Comments (ID: 03216738):

Congratulation for successful resuscitation without neurologic complications. This is a well written paper. I agree with your opinion of role of ECLS for sudden cardiac arrest.

--Response: Thank you very much!

Comments (ID: 02445850):

The authors reported the case of a patient with anomalous origin of right coronary artery, successfully saved from cardiac arrest. There are other cases in literature, that described the use of ECLS as support in cardiac arrest and this case further attests the utility of this support. We congratulate the authors for this well described case.

--Response: Thank you very much!
