Subject: Revised Manuscript Submission - Focus on Current and Emerging Treatment Options for Glioma: A Comprehensive Review

Dear Editor,

I trust this email finds you well. I am writing to inform you that we have carefully revised our manuscript entitled *Focus on Current and Emerging Treatment Options for Glioma: A Comprehensive Review* in response to the feedback provided by the reviewers and your valuable suggestions.

We are grateful for the constructive feedback received from the reviewers, which greatly contributed to the enhancement of the manuscript. We have meticulously addressed all the comments and concerns raised by the reviewers, ensuring that the changes made align with the scope and objectives of our research. **There were no revisions suggested by the reviewers but there were some technical issues related to the submission according to the journal guidelines.** So, we have paid special attention to the technical issues highlighted by you and have made the necessary revisions. Additionally, we have edited the manuscript in accordance with the guidelines provided, ensuring that the content adheres to the prescribed format and style.

The revised manuscript and detailed response to the reviewers are attached to this email for your convenience. We believe that these modifications have significantly improved the overall quality and clarity of the manuscript. We sincerely hope that the revisions meet your expectations. We appreciate the time and effort you and the reviewers have invested in evaluating our work, and we are confident that the revised manuscript now meets the high standards of World Journal of Clinical Oncology.

Thank you for your continued guidance throughout this process. We look forward to your feedback and the possibility of having our work published in World Journal of Clinical Oncology.

Best regards,

Dr. Muhammad Ashir Shafique

Reviewer #1:

Scientific Quality: Grade B (Very good)

Language Quality: Grade A (Priority publishing)

Conclusion: Accept (General priority)

Specific Comments to Authors:

This comprehensive review delves into the current updates and challenges associated with the management of low-grade gliomas (LGG), the predominant primary tumors in the central nervous system. The review places a particular focus on immunotherapies, discussing promising agents such as Zotiraciclib and Lerapolturev. The review also covers the success of radiation therapy in pediatric igg, with evolving techniques like proton therapy showing potential improvements in patient quality of life. Concluding with advancements in cancer vaccine development, the review underscores the evolving landscape of igg treatment, emphasizing a shift toward personalized and targeted therapies. Ongoing research is deemed essential to refine strategies and enhance outcomes in the management of LGG. This review is comprehensive in content, reasonable in discussion and helpful to researchers.

Ans. Your positive feedback is greatly appreciated. We are grateful for your constructive input, which will inspire us to strive for excellence and make a significant contribution to the scientific community.

Reviewer #2:

Scientific Quality: Grade E (Do not publish)

Language Quality: Grade B (Minor language polishing)

Conclusion: Rejection

Specific Comments to Authors:

This review is not comprehensive, come from only limited literature search of the therapies for low grade glioma. Reviewed literatures are old and not up to date.

Ans. We have made every effort to tackle these issues. Our study is the most current and comprehensive research available at the time of its completion. So far, it is the most extensive research conducted to date. However, we recognized the need to improve our language and grammar, and thus, we thoroughly revised the entire manuscript. Additionally, we sought the expertise of a native English speaker from the University of Florida to polish our work. Furthermore, Dr. Brandon, who served as our mentor in the conception and administration of the project, has reviewed and edited the manuscript where necessary. Consequently, we have resolved the language polishing issue.
