

Dear Editors and Reviewers,

We want to thank you for your insightful comments and suggestions. We made all possible changes that were suggested and detailed them in the table below. We sincerely appreciate your insightful comments on the paper. We want to thank you again for your valuable time and contributions to strengthening our manuscript.

Yours truly,

The corresponding author on behalf of the authors.

		Comment	Response to reviewer's comments
Editor	E-1	Authors are required to provide standard three-line tables, that is, only the top line, bottom line, and column line are displayed, while other table lines are hidden. The contents of each cell in the table should conform to the editing specifications, and the lines of each row or column of the table should be aligned. Do not use carriage returns or spaces to replace lines or vertical lines and do not segment cell content.	Thank you for your comments. The tables have been corrected as indicated.
	E-2	Before final acceptance, when revising the manuscript, the author must supplement and improve the highlights of the latest cutting-edge research results, thereby further improving the content of the manuscript. To this end, authors are advised to apply a new tool, the RCA.	Thank you for your comments. The corresponding author first signed up for the RCA and then applied it, and supplemented and improved the highlights of the latest cutting-edge research results.
Reviewer 1	R-1	novelty of work should be added in abstracts and conclusions .what new finding of this study ?	Thank you for your comments. The new finding of this study is "Even though orthopedic surgeons have got enough knowledge about preventing and managing PJI, their attitudes might contradict their knowledge." This information has been added to both the abstract and conclusion sections.
	R-2	there needs to be extensive discussion on the results obtained, compare with other studies of similar nature.	Thank you for your comments. The data of this study have been compared and discussed with other studies of similar nature.

	R-3	What is the main reason for antibiotic prophylaxis in Orthopaedic surgery?	<p>Thank you for your comments.</p> <p>Periprosthetic joint infection is a critical complication after joint arthroplasty operation and increasing morbidity and mortality accompany this case. And treatment of PJI is difficult and patients generally need to undergo more than one major operation and have antibiotic treatment in order to annihilate the infection. The main reason for antibiotic prophylaxis is to prevent infection. Paragraph one of the introduction section contains the answer to this question.</p>
Reviewer 2	R-1	Dear author thank you for submitting the manuscript.	Thank you for your comments.
