Name of Journal: *World Journal of Orthopedics*

ESPS Manuscript NO: 29319

Manuscript Type: Case Report

Author Response	Revised Manuscript Line Number and Text Change
Reviewer 1. As a Case Report, this is low level evidence. However, it does provide clinically relevant information for surgeons who perform reverse shoulder arthroplasty surgery and is worthy of publication.	Thank you for your comment.
Reviewer 2. I would suggest the authors to evaluate the function of the shoulder joint with a classical evaluation system and a longer follow-up time.	Thank you for your comment, We agree a follow up study might address those comments properly.
Reviewer 3. The case report is novel and does have educational value and is well described. The format of the case report needs major attention and should be re-written in the journal format. A few more references related to scapular fracture should be cited. I would suggest the case report to be accepted for publication provided the authors make amendments according to the journal format.	Thank you for your comment. The format has been fixed.
