Columns: Case Report

Anesthesia for bronchoscopic amniotic membrane grafting to treat non-healing bronchial dehiscence

Taoyuan Robert Feng, Thomas R Gildea, D John Doyle

All matters related to comments from the reviewers have been incorporated into the manuscript and identified in the manuscript as boxed comments in Word

1 Note the IRB / ethics approval statement

2 Our patient's existing tracheostomy lent itself well to inhalational induction with sevoflurane since this merely involved connecting the tracheostomy tube to the patient breathing circuit.

This sentence was changed as per the reviewer's suggestion.

3 Figure 1 legend Revised as per reviewer's suggestion.
