

1	During the patient's hospitalization.No bone marrow biopsy was performed.Why not to perform a bone marrow biopsy?	Respected Sir/Maam, the bone marrow biopsy was performed for this patient, the findings of which are mentioned on Page 3 Line 2-5 (highlighted in yellow now)
2	Treatment. The author provides treatment materials that are not very detailed. Suggest providing a more detailed treatment plan	Our treatment included stopping imatinib, doing mutation analysis, and we switched to second line TKI. The patient was advised for stem cell transplant for which she gave negative consent. She was followed up on dasatinib and her symptoms resolved. Page 4 Line 81-85
3	Figures – Legend .Figure 2 ,Contrast enhanced computed tomography of abdomen showing Ascites (Blue arrow), Omental caking (Green arrow), Hepatomegaly (Red arrow), and Splenomegaly (Yellow arrow). marked with red, blue, and yellow, suggests to redesign.	
4	The provided pathological images show unclear cell morphology, and Provide a suggestion for the author to provide clearer images again.	The images have been improved with clearer cell morphology to the best of our capability. Included in the image file.
