

May 30<sup>th</sup>, 2019

Dear Editor in Chief,

Thank you for the suggested revisions and the opportunity to revise our manuscript and resubmit. We have reviewed our case report manuscript and have made the suggested revisions. Mostly we have reviewed grammar and tense, clarified wording, history, physical exam and results as recommended, revised the references and added a title to the graph. In addition, we are providing an audio core tip of the abstract.

Reviewer 00742117 - Regarding difference between MVID and Congenital Primary lactose intolerance, 1<sup>st</sup> is secretory diarrhea while the 2<sup>nd</sup> presents as osmotic diarrhea (see discussion, sentence 3).

Reviewer 03328331 – Vitals and blood gas analysis from day 4 are not available from transfer records obtained.

All other reviewer comments were addressed in the body of the manuscript as they mostly pertained to wording clarification. Please let us know if there are any questions or concerns or anything else we should add.

Sincerely,

Danitza Velazquez, MD, FAAP
