

12.31.15

Dear Fang-Fang Ji and Respected Reviewers,

Please find below a description of revisions; we greatly appreciate the feedback and input regarding manuscript 23370.

1. The requested audio core tip has been included.
2. An additional statement and reference were added on page 4, to reflect the very recent approval of by the FDA of its 2014 proposals. Citation numbers were corrected in the manuscript and reference list.
3. On page 9, the superscript "2" was added to ensure appropriate units for the body mass index.
4. In response to a reviewers' suggestion, "...encourage the authors to provide some data into tables: one table for a list of complications and their incidence; a second table summarizing literature data according to various reports." Unfortunately, we think the data reported in this article is too heterogeneous to really summarize in 1 or 2 uniform tables regarding incidence/prevalence – incidence/prevalence of mesh complications is a large topic, the subject of Cochrane Reviews actually, so it would probably not be appropriate for us to put a "summation" table regarding this, in this particular mini-review, with the data discussed in it. In lieu of this, we have now included a Table entitled: Presentation of Mesh-Associated Adverse Outcomes. This table presents proposed risk-factors for mesh-associated complications and also includes typical presenting patient complaints. We hope this will provide some additional useful information for readers.
5. All citations, with the exclusion of 3-6, should meet your requests. Citations 3-6 represent websites, thus, there are no PMID or DOIs for the websites. The URLs are included in each of the citations.
