

Dear editor of the *World Journal of Experimental Medicine*

We would like to thank you for considering our work for publication

And we thank the reviewers for their positive comments

We hope the changes we made will meet your approval

**Reviewer #1:** In the abstract, slight changes are required. However, the rest of the manuscript is good.

**Ans. Thank you for your positive feedback; the changes in the abstract were made as requested**

**Reviewer #2:**

**1.** Check for grammar/sentence construct in your abstract: "Bariatric surgery (BS) was used as an effective tool to achieve long-term weight loss in both sexes fertility has been extensively examined."

Ans. True, sir, that sentence was wrong, and it was revised. Thank you for the highlighting

**2.** One important aspect of outcome in BS is QOL-specifically fertility. Would authors suggest to include fertility workup/preop and in fun. as part of the multidisciplinary approach? And maybe included in future guidelines.

**Ans. Dear reviewers,we really appreciate raising this point; it was an exciting addition to our paper. Kindly see the changes we made highlighted in yellow.**
