Re: MS No. 27320 "Gene environment interaction in periphery and brain converge to modulate behavioral outcomes; Insights from the SP1 transient early in life interference rat model"

We thank the reviewers for their comments. We have revised the review manuscript accordingly. We have added a running title, author contribution, conflict of interest and marked the location of the figure in the text.

We submit with the revised MS a Core Tips audio file, signed Copyright Assignment form, and screen shot picture of the Google Scholar title search. Unfortunately, we have no access to *CrossCheck* and could not apply it to our review paper. We have already declared that there is no plagiarism in our review paper.

Sincerely,

Dorit Ben Shachar, PhD
Head of Lab
