

Reviewer #1

Thank you very much. You have provided many thoughtful points for incorporation into our manuscript.

Specific points:

1. Abstract section has been improved so that now it covers etiology, classification, pathogenesis, pathology and management in a summary manner and the content has been streamlined.
2. The novel point in this review is the development of minimum diagnostic criteria for the pathological diagnosis of PT-TMA in kidney transplant patients.
3. The headings and subheadings of paragraphs have been arranged in a logical sequence to comply with the structural hierarchy of the manuscript.
4. Preventive measures and strategies have been addressed under a relevant heading.
5. English errors have been corrected.

Reviewer #2

Thank you very much. We have incorporated your points in the etiology of PT-TMA. These were very useful for improving the quality of our manuscript. Two of the references have also been incorporated. We did not include article by Maura Faraci et al. as we did not find it relevant to this article, which is focused on PT-TMA in kidney transplant setting.
