

Dear Reviewers,

We thank you for your helpful comments and guidance. We have addressed the comments as follows:

1. Figure numbers are not correct
2. Few minor language polishes
3. Although the review is comprehensive, the issue can be more focus on some more important areas
4. Some parts cut to make this more focused
5. Illustrations re-drawn

We have revised and corrected the figure numbers. In places text has been reworded to improve flow. Sections have been cut or reduced (particularly DDAVP, rFVIIa and fibrinogen Concentrate). We have refocused the conclusions to place the review and the significance of the key take-home messages in today's clinical context.

Thank you again for your suggestions, which we hope you agree, we have addressed.

Yours Faithfully,
Ciara Donohue
