

Answering Reviewers

Reviewer #1 comments

1. In this manuscript, the authors review the clinical features, pathogenesis, histology, risk factors, and treatment of nephrogenic systemic fibrosis. This paper concludes that gadolinium-based contrast agents should be used with care when performing magnetic resonance imaging in patients with kidney dysfunction. This paper is both clinically interesting and helpful; however, it requires considerable revision by the authors. Minor comments: 1. Reference number 19 is placed after the number 2. Please review and correct the numbering of the references.

Reply: Corrected

2. The authors should show the insertion point of Table 2 in the text.

Reply: The insertion point of Table 2 in the text is added.
