Reviewer #2

1. Although this is a narrative unsystematic review, it is still preferably to outline briefly the method used to identify the literatures included (eg. years, keywords, search methodology used). This can provide readers a good overview of the evidence included in this manuscript.

Ans: The relevant search strategy has been included in the article after the "background" section.

2. Table 3: Unit of blood sugar & HbA1C should be stated. The different definition of AHA, WHO should be referenced as in Table 2 for consistency.

Ans: The definitions have been referenced and the units have been stated.

3. Some typos are noted within the text.

Ans: Corrections have been done.

Company editor-in-chief:

- 1. Authors are required to provide standard three-line tables Ans: Tables have been formatted accordingly
- 2. Authors are advised to apply a new tool, the RCA. RCA is an artificial intelligence technology-based open multidisciplinary citation analysis database. In it, upon obtaining search results from the keywords entered by the author, "Impact Index Per Article" under "Ranked by" should be

selected to find the latest highlight articles, which can then be used to further improve an article under preparation/peer-review/revision

Ans: RCA tool has been used as per suggestion and mentioned in the search strategy as well.
