

**Name of Journal:** World Journal of Methodology

**ESPS Manuscript NO:** 17315

**Columns:** Editorial

Below are my comments to the two reviewers:

Thank you for the responses of the two reviewers.

I am very happy for the positive responses.

I have followed the given advise.

1. Question mark deleted.
2. Basic instead of superficial

Major comments:

1. I have provided an algorithm for the examination as Figure 1 and inserted some comments below the figure.
2. The suggested citation in Crit Car med has been inserted as an example of balancing technology toward clinical skills.
3. The consequences regarding outcome of this or similar approach has been briefly discussed in the end of the editorial and additional references were inserted. We definitely need more evidence in particular with regard to prevention.
