Supplementary Figure 1 A 56-year-old female with ascariasis. A: A hyperattenuated, long, tubular structure in the extrahepatic bile duct on the portal phase axial image of contrast-enhanced imaging; B: An elongated filling defect was found on endoscopic retrograde cholangiopancreatography; C: A tubular, round-shaped, hyperechoic lesion with a central hypoechoic area without significant posterior acoustic shadowing was seen on endoscopic ultrasound; D and E: The *Ascaris* nematode was confirmed by endoscopic removal.
