

## Supplem Fig.1

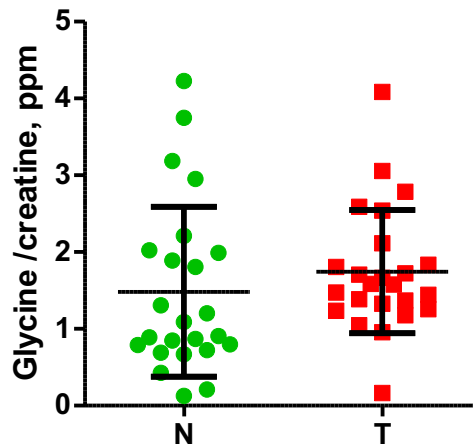

**Supplementary Figure 1.** Correlations between levels of taurine and sex of colorectal cancer patients. Graphs represent the quantification of both taurines normalized by creatine of Tumor (T) and Non-tumor (N) tissue depending on the sex of analyzed CRC patients.

## Supplem Fig.2

A.

B.

**Supplementary Figure 2.** Levels of acetate and glycine measured by High Resolution Magic Angle Spinning in Tumors (T) versus Non-tumor tissue (N). Graphs represent the quantification of acetate (A) or glycine (B) in Tumor versus non-tumor tissue.
