

**Supplementary Figure 1 Optimal cut-off value for the albumin-to-alkaline phosphatase ratio (AAPR) was identified by ROC curve analysis.**

**Supplementary Table 1 Relationship of albumin-to-alkaline phosphatase ratio (AAPR) and treatment regimens with median overall survival (mOS) and median progression-free survival (mPFS) in metastatic gastric cancer.**

Variables	Number	mOS (95% CI)	mPFS (95% CI)
AAPR≤0.48			
Combination chemotherapy	64	10.37(7.40-13.33)	6.17(3.68-8.65)
Fluorouracil or taxane alone	10	2.40(1.88-2.92)	2.37(1.95-2.78)
Radiotherapy	1	4.37	4.033
Best supportive care	11	1.17(0.45-1.89)	1.17(0.45-1.89)
AAPR>0.48			
Combination chemotherapy	83	14.70(10.87-18.53)	9.63(7.22-12.05)
Fluorouracil or taxane alone	7	6.27 (3.27-9.26)	5.10 (0.40-9.81)
Radiotherapy	2	8.90	7.13
Best supportive care	13	1.70(0.62-3.44)	1.70(0.45-2.95)
