### JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

I have carefully read the manuscript entitled: Incidentally detected hydatid cyst of the adrenal gland: A case report.

The paper is focussed on:

Hydatid cysts are a zoonotic disease that can involve many organs and tissues in the human body but primarily involve the liver and lungs. Of the main organs, adrenal glands are those seldom affected by hydatid cysts.

The purpose of this study is to present a case with an incidentally detected hydatid cyst of the right adrenal gland on computed tomography treated with albendazole because of a positive echinococcus IgG ELISA test on top of a toxic multinodular thyroid goiter for which thyroidectomy was indicated.

The quality of this article is low, confusing and confounding.

The authors should explain why they did not perform PAIR of laparoscopic aspiration, but did perform open abdominal surgery plus cholecystectomy?????

The Abstract information is awfully bad. I have serious major comments not to publish such an article with a complete lack of clinical and scientific significance.
