JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

Suggestions: major revision The paper aims to identify influential factors impacting sports and work after a lateral ankle sprain. Nevertheless, the introduction falls short in providing detailed descriptions of the latest research updates on these factors, focusing primarily on the prevalence (paragraph 1) and negative effects of lateral ankle sprain (paragraph 2). Therefore, the most crucial content is missing from the research background. In the methods section, there was an absence of information regarding the time frame for literature search and the expected outcomes for this study, necessitating clarification. Furthermore, there was no analysis conducted for publication bias, a critical aspect in ensuring a thorough comprehension of the research domain and addressing concerns such as information selectivity or reporting bias in the results. Moreover, the discussion section lacks a clear logic that aligns with the results. In the results section, several influential factors are elucidated, including various treatment methods, surgical approaches, and immobilization
