### JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

This article needs to be re-reviewed by the editorial office for proper English. Also, the authors describe infusion of chemotherapeutic agents through the hepatic artery, and do not discuss any complications with the biliary system. Since the hepatic artery feeds the bile ducts, one might expect biliary toxicity with such infusions. A simple question to the authors, are there no reports of biliary complications, or are they just not considered in this article? If there are no reports of any biliary complications, no additional revision of the manuscript is needed. If there are biliary complications, please discuss them in the manuscript.
