JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

ESPS Manuscript NO: 14254 Clinical Trials Study Use of magnetic resonance elastography for assessing liver functional reserve: A clinical study Comments 1. The introduction section is too short 2. In the material and methods section authors need to explain that they assessed the Child Pugh Score. Also they need to include the anthropometric variables and the complete liver function tests as well as the platelets and serum creatinine 3. In the results sections authors need to modify the title of table 1. I suggest by: Demographic, clinical and biochemical characteristics. Also they need to include the body mass index, and all liver function tests
