<input type="checkbox"/> Grade C: Good	<input type="checkbox"/> Grade C: A great deal of language polishing	<input type="checkbox"/> Revision
<input type="checkbox"/> Grade D: Fair	<input type="checkbox"/> Grade D: Rejected	<input type="checkbox"/> Rejection
<input type="checkbox"/> Grade E: Poor		

JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

This is a well-designed good prospective study. For me, there is just one recommendation. Maybe, the histologic changes are so obvious that the authors may not analyze the histologic improvement semiquantitatively. However, if possible, please analyze the histologic changes semiquantitatively (degree of steatosis, inflammation or fibrosis. Please refer to the paper of Sanyal et al, NEJM 2010;362:1675-1685).
