### JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

The presented review article of Dr. Bhat and colleagues on the subject of implication of the intestinal microbiome in complications of cirrhosis is well written and performed and concise in its content. The review article is of high interest for the readers of WJH. The authors successfully implemented the criticisms and comments raised by the reviewers in the revised version of the manuscript. Especially figure 1 was modified and a table showing a summary of facts was added. The language meets the requirements for publication. I have no additional and specific comments to the presented review article. For that I consider accepting the revised manuscript for publication in World Journal of Hepatology as it is.
