## **JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS**

The paper highlights the role of comprehensive cardiac rehabilitation in the current Cardiology practice. They highlight that despite high quality evidence and recommendations supporting the same, these are grossly under-utilised in clinical practice. The review is brief and not written in a particular flow or order. I would like to see more subheading and a clear flow of ideas. An overall illustration and/or table summarising the most recent evidence will add to the manuscripts quality.
