JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

A case report should be either unique and/or of broad educational value in order to be acceptable for publication. Unfortunately, this article is not of sufficient interest to our readership to warrant publication. In case report section about treatment, authors described a posterior splint was used for 4 weeks; but in discussion section, authors described a posterior splint was removed 3-4 days after reduction. Which is correct? In Core tip: Sentence "Subtalar dislocations are typically occurs..." needs to be changed as "Subtalar dislocations occur typically ...".
