JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

I congratulate the authors on the acceptance of this fine article. I have made some minor editorial changes to reflect the need to educate readers. I added bone augmentation, because new techniques are not just trying to preserve the alveolar ridge but to increase the amount of bone that are able to support implants. I also notice the absence of focus on freeze-dried bone which most of the literature still advocates as being among the most reliable biomaterials. Freeze-dried bone is still certainly superior to PRP and synthetic materials.
