JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

Mother-to-child-transmission of HIV is an issue of pediatric HIV infection. HIV testing is a valuable strategy to reduce the incidence of pediatric HIV infection and to provide appropriate health care. This review manuscript summarized the factors potentially to effect the women willingness for the HIV testing during pregnancy. A better understanding of related factors is assumed to be helpful in early screening of the susceptible individual and reduce consequences. This manuscript was improved after revision and those reviewers recommended its acceptance. Thus, I also recommended its acceptance for publication.
