JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

A practical setting of clinical specimen collection, record, and quality control is crucial to further sample measurement and testing, especially for those critical diseases, such as HIV transmission. This retrospective study highlighted the problems and reasons contributing to rejection of DBS. The setting is crucial to prevention of mother-to-child transmission of HIV and treatment to infected infants. All the reviewers had positive comment on its acceptance for publication in this Journal. I recommended its acceptance.
