## Manuscript Title:

Multidetector computed tomography 3D and multiplanar reconstruction diagnosis of a rare cause of gastrointestinal bleeding: a case report

## Date of Revision

November 30, 2020

### Abstract:

#### BACKGROUND

Anastomosis of the testicular vein with the superior mesenteric vein rarely causes severe gastrointestinal bleeding. To date, there have been few studies describing its appearance under medical imaging. Here, we present multidetector computed tomography (MSCT) 3D and multiplanar reconstruction (MPR) images of a typical digital subtraction angiography (DSA) showing proven ectopic bleeding and provide the first review of the image performance.

#### CASE SUMMARY

A 68-year-old man who had been rushed to the hospital with a four-day history of melena and fainting underwent multiple esophagogastroduodenoscopy (EGD) procedures that failed to identify the source of bleeding. We used MPR combined with three-dimensional reconstruction images...

This document certifies that the manuscript listed above was copy edited for proper English language at LetPub. All of our language editors are native English speakers with long-term experience in editing scientific and technical manuscripts. We are committed to leveling the playing field for researchers whose native language is not English.

- Neither the research content nor the authors' intended meaning were altered in any way during the editing process.
- Documents receiving this certification should be considered ready for publication where language issues are concerned.  
*However, the authors may accept or reject LetPub's suggestions and changes at their own discretion.*
