

Dear Editor,

I hope my review now follows the guidelines of the World Journal of Radiology. The manuscript has been verified by my colleague native English speakers. I hope now follow the scientific linguistic standards.

I hope that changes in form and content are adequate to clarify the study design and the aim to allow the publication of the paper on a major journal like WJR.

I hope that this work can be interesting for clinicians, radiologists and surgeons who deal with HCC.

Best Regards

Giorgio Greco, MD
